

**T**hank you for your continuing support of this project. Please accept our apologies for the length of time since our last report. We trust you will be encouraged by this update.

Not only does Prossy continue to make a huge impact in Uganda but since we last reported two further nurses are being funded as a result of your support. Vietty Rubayiza and Brigitte Mukangwije both in the Shyogwe Diocese, Rwanda.

Please continue to support this project and provide funding for these nurses in the years to come.

**P**rossy **Nalutaaya** continues to make a huge impact on those served by Kimwanyi Health Centre, Uganda. She has come to know and gain the trust of the local community, giving antenatal care, offering advice on immunisation, family planning, HIV/AIDS and generally assisting in the clinic.

During our recent visit we accompanied her on visits to the local villages where they were obviously delighted to welcome her. We also took the opportunity to visit many of the homes where Mosquito Nets had been distributed as a result of our Mozyzy Project.

Nurse Prossy visiting local villages

Thank you for our Mosquito Nets

# Thank you

Vietty

**V**ietty **Rubayiza** is married and has four children including one year old twins. During our visit to Rwanda in January 2013 we were delighted to meet with both Vietty and his wife Speciose.

Vietty has been employed at Shyogwe Health Centre since October 2012, and we are told he is making a big difference in their ability to provide a more efficient service to the local community.

A large proportion of his time is devoted to preventative medicine through the vaccination of children under five

Brigitte

**B**rigitte **Mukangwije** was employed at the Gikomero Clinic at the beginning of June 2013 after a specific request was made during our visit. Gikomero has 25 beds and just 3 nurses after a reduction in government funding left them unable to recruit sufficient staff for this newly opened centre.

Brigitte has a diploma in general nursing having completed three years training at university in the Congo.
